
Spatial validation
Intersection accuracy
Error diagnosis
Topological & structural metrics
Input driver maps
Road network
Urban extent
8
Final road network
1
Input data processing
Road upgradation
New road development
Road hierarchy
7
Hierarchical linear growth
Urban cluster detection
2
Density-Based Spatial Clustering of Applications with Noise (DBSCAN) algorithm
Preferential attachment
Pattern-based growth
6
Radial pattern-based growth
Suitability & growth direction determination
3
"Attraction values" as a factor of distance, urban area size, building height & total population
New origin node detection
Angular constraints
5
Pattern detection
4
Circuity
Existing pattern filter
New pattern origin
Connectivity
Centrality measures
Dijkstra's algorithm
Input data
Pre-processing
Pattern analysis
Road growth
Model output
